

## Activity 2.4a

### Mapping Feedback and Feed Forward Pathways

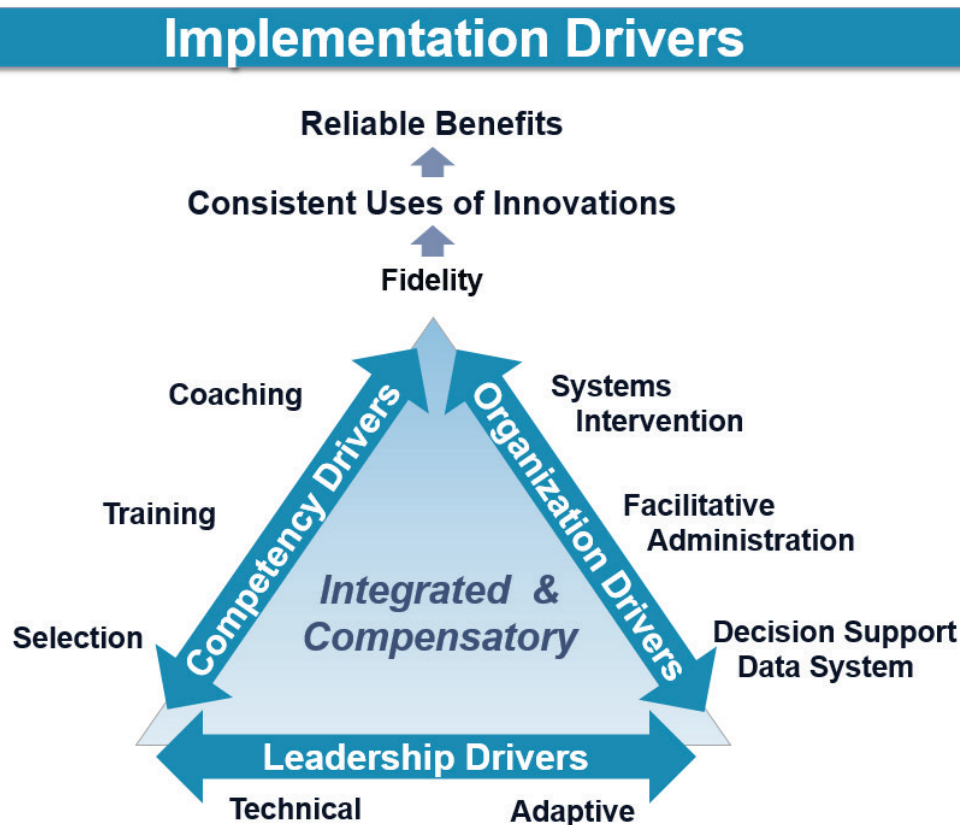

Integration of Implementation Drivers, including creating information/communication pathways, is a key facet of doing Active implementation. Using the Implementation Drivers diagram, map your current, then improved information/communication pathways between Drivers. Then name three ways to get there.

#### Instructions

#### 1. Map your current feedback and feed forward processes

For example:

- If a Driver is connected to another Driver via an established information/communication protocol, draw an arrow from that Driver to the other Driver.
- If the information and communication process is a two way flow, put arrows on both ends of the connector.

The Active Implementation Hub, AI Modules and AI Lessons are developed by the State Implementation & Scaling-up of Evidence-based Practices Center (SISEP) and The National Implementation Research Network (NIRN) located at The University of North Carolina at Chapel Hill's FPG Child Development Institute. Copyright 2013.

## 2. Map your improved feedback and feed forward processes

Review your map from Part 1. Then, think about how a Driver can “feed back” information to another Driver to help improve Driver quality (e.g., training outcomes can inform selection protocols). Think about how each Driver can “feed forward information to other Drivers to improve Driver quality (e.g., feed forward of training results to coaches to help coaches focus more quickly on certain skills).

- How could new information and communication pathways be created?
  
  
  
  
  
  
  
  
  
  
- How might one-way flows be converted to two-way flows?

## 3. Apply It Now

What are three things you could do to improve (*integrate*) feedback and feed forward processes (e.g., information/communication pathways) between Drivers in your current setting?

Goal/Purpose	Action	Lead
Action 1		
Action 2		
Action 3
